RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 62 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1875 Excerpt: . . . and 33JQ; and in December, 65 and 35. For detailed meteorological register, see report to Surgeon-General of the Navy, dated June 12, 1875; published by Bureau of Medicine and Surgery, 1876. The force of the wind is figured on the scale usually employed on seagoing vessels, according to which the maximum is 12, representing the strongest possible wind, such as is experienced in a typhoon or hurricane. According to this scale the force of the wind was three times estimated to equal 11, and fourteen times 10, in violence. Such estimates are of course liable to a certain personal error on the part of the observer; but it is not probable that in this case the error lies on the side of excess. The average daily rain-fall for November was 0.205, and for December 0.252 inch, no rain-gauge having been set up previous to November. Both the rain and tide gauges were extemporaneous contrivances, constructed by Commander Byan as soon as opportunity and leisure offered. By the latter the rise and fall of the tide were measured with considerable accuracy, and were found to vary from 3 feet to 7 feet, according to the season of the month, and partly to the direction and force of the wind. The average rise of the tide was about 5 feet. MAMMALS. The only land-mammal found on the island is the common mouse (*Mus musculus*), which abounds everywhere; doubtless imported by one of the earlier sealers. It...
