Brand New Book ***** Print on Demand *****.Excerpt from Switchboards: For Power, Light and Railway Service, Direct and Alternating Current, High and Low Tension In a very small, isolated plant, where a single generator is used, the current can be conveyed to the apparatus in which it is utilized in a comparatively crude manner; all, in fact, that is required being suitable conducting wires to complete electric circuit. If there are several generators, feeding into a more or less complicated network of distributing wires, the circuit connections will become complicated unless a systematic way of arranging them is resorted to. There will be considerable complication even if only one generator is used, providing the distributing system is complicated. To simplify the arrangement of the wiring, the best course of procedure is to run the wires leading from the generator, or generators, to a central point, and then from there branch out to the various distributing circuits. This central point to which the generator wires are run, and from which the circuit wires start, is called a switchboard. The general arrangement of a switchboard depends...
